

## Homework Questions for 21. May, 2008

(To be turned in during class. Please type your answers and include the questions.)

(Adapted from the discussion guide to the PBS Series, "The Question of God")

1. What is the "scientific method"?
2. How much of what you know derives from scientific observations you yourself have made?
3. How have scientific discoveries changed people's thinking about the human mind?
4. Do you think that the human mind is fundamentally a physical device run by chemical reactions?
5. Is the "scientific method" the best way we have for establishing truth? Can science explain or answer our desire for meaning and purpose?
